

STEAMVAC Gulpa - Ultimate inline waste management system

This is the ultimate waste system for commercial carpet cleaning & flood work. The advantage is in the design, the Gulpa is made out of a clear perspex box which enables you to show your clients exactly what sort, and what volume of dirt is being sucked out of their carpet.

The Gulpa takes waste before your portable, which means less moisture enters your machine, ultimately aiding to prolong vac motor life. Used externally as normal, or internally where the pump is installed into a waste tank, the Gulpa gives your machine an auto waste pump feature, with no need to manually drain waste.

STEAMVAC Sizzler - 1000 psi inline pressure water heater

The Sizzler is a 1000 psi inline pressure water heater that boosts heat from your portable. It operates on 10 amp power and is ideal to work inline with a portable unit for the cleaning of upholstery and other applications where heat can be lost through water solution lines.

It is fitted with a stainless steel inner heater coil rated at 3000 psi and an adjustable thermostat with a safety shut off.

STEAMVAC Booster - Create more vacuum suction

The Booster is an added vacuum air flow booster pack designed to work inline with a portable machine.

This means you can run longer lengths of vac hose to gain better access to your jobs, or simply use it in conjunction with your current hose length to boost suction performance resulting in faster drying times.

Housing 2x1100 Watt 2 stage vac motors with a genuine wet seal on bearings, this unit will almost double the vacuum performance of any unit that includes a booster port as standard.
